Our waste handling keeps production going

## Central Waste Handling System

---

The high degree of functionality of a Lundberg Tech central waste handling system comes from:

- Our great knowledge about the cutting of different materials
- Our great knowledge of air flow and the transport of waste by air
- Our experience from having supplied central waste handling systems since the 1980s
- Our network of highly qualified suppliers
- Our development activities
- Our 3D drawing systems

A Lundberg Tech central waste handling system can consist of:

- Funnels or pipes for the production-line capture of waste
- Granulators and cutters which can be fitted with an oil tank for in-house lubrication, coating to avoid blocking of glued materials, and with a hole screen for cutting the waste to the size required
- Ventilators
- Cyclones
- Separators of various kinds, such as rotary and air
- Filters (also for returned air)
- Various kinds of stand for granulators, separators, filters, etc.
- Units for the collection of the waste
- A complete electrical control system
- Pipe systems without inside edges which can also have inside treatment to avoid blockages with glued material
- Filter for cleaning and returning the air

Lundberg Tech offers the following services on our central waste handling systems:

- On site service and maintenance
- Exchange service of granulators and granulator parts
- Quick service for spare parts
- Repair service
