## FOCUS Label Machinery Hall 7, Stand 7 D 25

Focus shows the **d-Flex** compact solution for the one run production of digital printed and rotary die cut labels. The latest generation of Konica Minolta ink jet print heads integrated into the flexo printing, die cutting and slitting machine Reflex provide finished labels from plain rolls at a speed up to 50 m/min. Furthermore the **Reflex S** Servo converting system demonstrates the accuracy of its re-register system to process pre printed web to single or multi layer labels, tags and more even at speeds over 100 m/min. The full rotary system incorporates flexo printing/coating, cold foil, lamiating, varnishing, die cutting facilities in either roll to roll, or roll to sheet applications. In addition the brand new **e-FLEX model** is on display. The TWIN-SERVO system provides single touch set ups, with minimal waste for conventional printing and can be combined with a digital module for variable data, text & images. A 6 colour, 330mm wide press, equipped with full UV drying & chill roll system will be shown. Focus will also launch a new generation of the popular **Proflex** compact flexo press with open architecture print head design.

### FOCUS d-Flex

equipped with 2nd flexo printing unit before the digital printing unit for coating etc.
