**Focus Label Machinery Ltd & TS Converting Equipment Ltd (Elite Cameron) Launch New Flexo' machine with in line Hot Melt coating.**

UK based TS Converting Equipment Ltd / Elite Cameron have partnered with Focus Label Machinery to develop a range of machines for the manufacture of Labels, Tapes and Tamper Evident Security products.

The HM-FLEX range is said to have the ability to Print on a liner, apply a release coating, flip the web over between any of the stations, hot melt coat, laminate in a face stock if required, 4C print, die cut, slit and rewind all in one pass.

The modular format of the machine can be configured to provide a great mix of capabilities for customers. It eliminates the need to purchase pre-release coated or treated liners and combines multiple operations for inline manufacture of finished products.

The Flexo' units can be used for printing and the application of a wide variety of UV curable release coatings. The machine utilises the latest Rhino GEW UV system with Chill Rolls, Double sided Vetaphone corona treater and Proact web cleaner.

The coating module incorporates Valco Melton coating equipment, now standard issue on the full range of Elite Cameron Hot Melt Coaters. The head accurately applies stripes or full width, streak free coating of HM adhesives. The coat weight is monitored and displayed continuously on an NDC measurement system.

This totally integrated solution can be coupled with a range of 'in-line' converting options, all controlled using a Schneider PLC, with servo drives for perfect registration and tension control throughout.

"We have known each other for many years working in different but associated industries" comments David Lee Director of Focus "We have enjoyed working with the team at TS Converting and have delivered a truly integrated solution for the industry. We are already working on other applications together and feel this is the beginning of a close and mutually beneficial relationship"

"We partnered with Focus to deliver this first machine to a UK based customer" comments Tim Self, of TS Converting, "We are both privately owned businesses with a common goal to develop cutting edge technology for a Worldwide base of customers"

## **About TS Converting Equipment Ltd (Elite Cameron)**

The company specialise in manufacturing innovative solutions for the slitting, coating and laminating of a wide range of substrates. Their conventional and UV Hot Melt coating range have been extremely popular with companies looking to move away from solvent and water-based systems. All machines are designed to suit individual applications incorporating a host of unique features that optimise performance.

## **About Focus Label Machinery**

The Company manufactures a range of narrow web printing presses including conventional Flexographic, digital & hybrid machines. Industries are as wide as textiles, labels, packaging and security applications. Focus are unique in their approach to provide bespoke solutions from its modular design systems.
